

AMENDMENTS TO THE SPECIFICATION

Change page 33, line 23 to page 34, line 1, as follows:

The rotary printing machine in this embodiment, as with the conventional example, is constructed as a variable cut-off length type rotary printing machine that can vary the cut-off length of the web 10 by changing the outside diameter of the first and second cut-off mechanisms 20A, 20B as in a printing cylinder (e.g., a plate cylinder or blanket cylinder) of the printing part 4.
